****In most cases these use existing fittings**

***** We have installed these energy saving bulbs in a number of businesses, including the Living Choice Retirement Village Leisure Centre at Kawana, where their electricity demand fell from 4050 watts, down to 891 watts, a very significant saving.**

Hi Paul

Thankyou for your prompt service regarding the installation of the many low energy bulbs to our Leisure Centre. We are looking forward to our energy savings, reducing our carbon foot print and saving money as well.

Cheers

Russ

Hello Paul

I just want to say thank you for introducing us to these new fluorescent lights to replace our halogen down lights. We have six in our reception in our Business Centre and after we replaced them all with your 9 watt bulbs no one noticed the change. Quite impressive when you replace 50 watt halogens with a 9 watt fluorescent lights. Power consumption has gone down from 300 watts to 54 watts. In addition to this I was able to reduce the number of transformers driving these lights gaining further power saving.

I am very happy with the new lights.

Regards

Andrew Dean
